## (57) Abstract:

**PURPOSE:** To provide an antibacterial agent containing a specific benzimidazole compound known as an antiulcer agent as an active ingredient and having a selective excellent antibacterial activity against *Helicobacter pylori*.

**CONSTITUTION:** An antibacterial agent contains a compound of formula I [ $R^1$  is H, alkyl, alkoxy,  $CF_3$ , acyl, alkoxy carbonyl; (n) is 0, 1;  $R^2$ ,  $R^3$  are H, alkyl;  $R^4$  is alkyl, alkenyl, phenyl, benzyl, cycloalkyl;  $R^5$  is H, (halo)alkoxy carbonyl, alkenyloxy carbonyl, phenoxy carbonyl, etc.,] or its pharmaceutically acceptable salt. Examples of the compound of formula I include 2-[(4-butylthio-3-methyl-2-pyridyl)methylthio]-1H-benzimidazole. Examples of the pharmaceutically acceptable salt of the compound of formula I include an acid addition salt such as hydrochloride or sulfate and a salt of formula II ((t) is 1, 2, 4; A is Li, Na, Mg, Ca, etc.), preferably Na salt, Ca salt or Mg salt of formula II.
